**ABSTRACT:**

The thesis is divided into the two parts. The first part describes basic information about HIV and AIDS - the essence of the disease, transmission of disease, method of spreading the principles of diagnosis, therapy options. I describe the basic principles of prevention for a wide strata of the population and the basic principles of teaching, education and prevention in the elementary school. The second part is called research investigation. It describes the basic structure of the work. The research part contains the way of teaching of HIV and AIDS in three selected elementary schools and one selected secondary school in eighth classes. Information was obtained using a questionnaire, where I find the knowledge and attitudes of pupils in individual schools and an interview with a teacher who has taught this subject. The results of the schools compare with each other. Based on the results of the evaluation recommendations processing (content, form) for individual schools.

**KEYWORDS:**

HIV / AIDS, disease characteristics, disease prevention
